

**Curriculum intent:** The aims of this qualification is to enable our learners to develop an understanding and the ability to apply the fundamental principles and concepts of computer science. This includes: abstraction, decomposition, logic, algorithms and data representation. We also aim for our students to have the ability to analyse problems in computational terms through practical experience of solving such problems, including writing programs to do so. We expect our students to think creatively, innovatively, analytically, logically and critically.

## ReVISION

Recapping all content from component 1 that was taught in year 12. Covered in second lesson with Component 2 and 3 covered in first lesson. Exam technique and exam questions covered during year 13 for Component 1 and 2.

**HE/  
Apprenticeships**

### Component 3 – Programming projects and revision

#### Design the solution

- Decompose the problem
- Describe the solution
- Describe the approach to testing

#### Developing the solution

- Iterative development process
- Testing to inform development

#### Evaluation

- Testing to inform evaluation
- Success of the solution
- Describe the final product
- Maintenance and development

#### Analysis of the problem

- Problem identification
- Stakeholders
- Research the problems
- Specify the proposed solution

#### Problem solving and programming

- Programming techniques .

Practical programming activities across the year to embed programming skills learnt..

### Component 2 & Programming skills

**YEAR  
13**

#### Problem solving and programming

- Programming techniques .

#### Computational thinking 2

- Thinking logically
- Thinking concurrently .

#### Computational thinking 1

- Thinking abstractly
- Thinking ahead
- Thinking procedurally.

#### Subprograms 1

- How to create subprograms and different types of subprograms

#### Subprograms 2

- Benefits of subprograms and the use of parameters and arguments

#### Arrays

- How to create lists
- 1, 2 and 3 dimensional arrays.
- How to loop through lists.

#### Mock

- End of year assessment.
- Assessing component 1 content

**EXTERNAL  
ASSESSMENT  
MAY/JUNE**

### Component 1 & Programming skills

**YEAR  
12**

#### Iterations

- Basic understand of for loops and while loops

#### 1.4 Data

- Data types
- Data structures
- Boolean algebra

#### 1.5 Legal, moral, cultural and ethical issues

- Computing related legislation
- Moral and ethical issues

#### Strings

- String manipulations
- How to format strings
- Length of strings

#### Types of programming

- Understanding the difference between sequence and selection
- How to combine different programming methods.

#### Basic Python concepts

- Understanding the interface
- Print function
- Strings/Integers
- Variables

### Component 1 & Programming skills

#### 1.3 Exchanging data

- Compression, Encryption and hash tagging
- Databases
- Networks
- Web technologies

#### Types of programming

- Understanding the difference between sequence and selection
- How to combine different programming methods.

#### 1.2 Software and software development

- Systems software
- Application generation
- Software development
- Types of programming languages

#### 1.1 Components of a computer and their uses.

- Structure and function of the processor
- Types of processor
- Input, output and storage

# BTEC Level 3 Extended Certificate in Information Technology Learning Journey

**Curriculum intent:** The aim of the Information Technology curriculum is for learners to develop a passion of creating IT systems to manage and share information, with a view to progressing to a wide range of higher education courses.
